Besides the big 17 inch series HP also offers a new series of compact 15 inch notebooks. One of these is the HP Compaq 6710b. Equipped with Core 2 Duo CPUs and integrated Intel X3100 video cards, the 6710b is a reasonable beginners notebook of this series. This article provides further information beyond detailed hardware specifications.

Case The new 15 inch business series by HP does not only look alike its bigger competitors by HP, the 17 inch series. It also resembles the 17 inch series regarding quality. Although the case is, besides the display cover, mainly made of plastics, the haptics is still alright. While handling the notebook, we could not detect any striking creaking noises or deflections.However, the ramshorn hook cannot completely prevent a slight wobbling, if the notebook is closed.Besides 4 USB ports at the notebooks sides also VGA and SVideo out are provided at the back side. Especially the USB ports are a little bit too far to the front, and can, so, depending on the attached device, limit the users area of operation.So, the Compaq 6710bs interfaces can be enhanced via a docking station. This can also solve problems with cable spaghetti. Front Side No Ports Left Side Power Connector, Fan, 2xUSB, Audio Ports, Firewire, PCCard Back Side Kensington Lock, Battery, LAN, VGAAOut, SVideo Right Side 2xUSB, Cardreader, DVD Drive, Modem Input Devices The keyboard of the HP Compaq 6710b is attached tightly to the case. Its keys are spacious and the layout is clear. Especially the cursor pad is clearly separated. Furthermore, a clear clicking noise can be heard, which, however, does not really disturb.The hot keys can be used by a slight touch and usage is visualized by activated LEDs.Especially its buttons are very userfriendly, because they have a long, soft travel. Touch pad A BrightView version is also available, but, has a reflecting surface.Outdoor Operation During our outdoor tests the display stayed legible, even if its total brightness is a little bit low in bright environments. Of course the matt surface contributes to the good rating outdoors. Regarding viewing angles the area of operation is spacious horizontally, and rather narrow vertically, outside it the display darkens respectively whitens as usually.

Although, you can choose between CPUs from T7100s to T7500s, the Intel GMA X3100 rather limits the 3D performance. In this field this notebook rates good, also because of its low emissions.With these video cards also CAD and the one or other game should not be a problem.Detailed information about the Core 2 Duo CPU can be found here.Benchmark Comparison 3DMark Although the fan runs permanently, it is not really annoying. Under load the noise level clearly increases, but, during office application the maximum noise level will seldom be reached. The average values are yet clearly below them.The slightly dull sound and the weak basses do not mind, because its a business notebook. The sound output via the stereo headphones port is trouble free and provides a good sound. Battery Runtime The 55Wh battery provided a very good runtime in our tests. This is basically because of the moderate equipment of the Compaq 6710b. The minimum runtime of about a little more than 1 hours is clearly exceeded multiple times by the maximum runtime of more than 7 hours. You can assume, that the runtime will be below the maximum in practice, but, nevertheless, it will be usable. Overall, we had a positive impression. We liked the slightly redesigned hot keys and

that the successful qualities like robust and stable case persisted. Maybe the touch pad is a little bit too low compared to the surrounding case, however, this is also a matter of taste. However, it could be a little brighter for outdoor usage. The also available WSXGA panel with a resolution of 1680x1050 pixels could be an interesting alternative. In this field the notebook rates good, also because of its low emissions. Surface temperature and the noise level of the fan stay always alright. But, take care, under load the Core 2 Duo processor and the integrated X3100 relatively quickly empty the battery. Such a rating is not often reached by office notebooks especially considering the input devices, emissions, and battery runtime.
