Introduction Congratulations on selecting the Solution 880 control panel to protect you and your property. So that you can obtain the most from your unit, we suggest that you take the time to read through this Manual and familiarise yourself with the numerous outstanding operating features of this system. You will notice that in all aspects of planning, engineering, styling, operation, convenience and adaptability, we have sought to anticipate your every possible requirement. 7 Programming simplicity and speed have been some of the major considerations and we believe that our objectives in this area have been more than satisfied. This Manual will explain all aspects of operating the control panel. All system parameters and options are detailed, however suitability is left up to the individual. Every system can be tailored to meet all requirements quickly and easily. The Solution range of control panels are very popular with thousands of people throughout many countries of the globe, all of whom have various levels of technical aptitude and ability. We have tried to aim this Manual at all levels of readers. Features The Solution 880 control panel uses the very latest in microprocessor technology to provide you with more useful features and superior reliability and performance. 8 Following is a list of the main features that the control panel will provide.

Auxiliary Output Output 2 Strobe Output Relay Output EDMSAT Satellite Siren Compatible Separate Fire Alarm Sound Electronics Design and Manufacturing Pty Limited 8 Solution 880 Operators Manual One option that can be programmed by your installer will prevent another installer or technician from performing any service to your system. 9 This should be discussed with your installer. Refer to Optional Equipment on page 48 for more information on accessories and other features that can be used with your system. Basic System Operation The overall purpose of your alarm system is to deter any would be intruder from entering your premises. Before leaving your home or office, make sure all windows and doors are closed. Enter your designated code followed by the AWAY button. Your alarm system will now arm in AWAY Mode and commence counting down the exit time. After the exit time has expired, you will hear one long beep at the remote codepad to indicate that the system has been armed in AWAY Mode. Any unsealed zones will be automatically isolated. The control panel is now ready to activate the sirens and strobe lights should an alarm occur. 10 If a zone that is sealed has triggered after exit time has expired, a number of events will occur. Following is a typical sequence of events. 1. The control panel will activate any audible devices such as sirens, flashing blue strobe light and the communications dialler. 2. The communication dialler will transmit all relevant alarm information via the telephone line alerting the respective persons of the current state of events. 3. The siren timer will commence counting down as soon as an alarm occurs. When the siren run time expires, the siren will automatically reset and be placed into a ready state for the next alarm. 4. Upon your return, the blue strobe light may still be operating to inform you that there has been an alarm. 5.

<https://ayurvedia.ch/02-rendezvous-owners-manual>

One or a number of zone indicators will be flashing, allowing you to identify the particular zones that caused the alarm condition. Show more. Users can run diagnostics, arm systems, and bypass zones

with an offsite computer. This reduces service visits to a site and provides quick customer service, saving time and money. Remote programming is useful for country locations where a control panel might be located hundreds of kilometers/miles from an office. Three Arming Modes Users can arm the system using one of three modes AWAY Mode Arms the entire system. STAY Mode 1 Arms most zones. Does not arm zones programmed as isolated installer. STAY Mode 2 Arms most zones. Does not arm zones programmed as isolated Master Code holder. Dualtone Multifrequency DTMF Telephone Remote Arming Users can arm the system from any remote location using a DTMF telephone. Once a communication link is established between a DTMF telephone and the system, users can operate the system using the telephone in the same way as a keypad. Day Alarm Day alarm monitors a group of zones when the system is disarmed. For example, the front door of a shop has a pressure mat or electronic beam that customers turn on as they enter or exit. The keypad beeps each time the mat or beam turns on. Duress Alarm A keypad duress alarm can work as a silent holdup alarm and is useful when the system reports to a monitoring station or pocket pager. Thank you, for helping us keep this platform clean. The editors will have a look at it as soon as possible. Discover everything Scribd has to offer, including books and audiobooks from major publishers. Start Free Trial Cancel anytime.

To start viewing messages,It hasnt been used it in recent 10 years and the wireless PIR sensors batteries rated voltage 3V and Control Panel backup rechargeable lead acid battery rated voltage 12Vare all in low battery status. This security system is used as burglar alarm system, with 4 wireless PIR sensors, one strobe outside the property, one piezo siren, one codepad and one power plug pack etc. The whole security system should still work well, just the batteries are low. Questions 1 why this security system cant be activated in the armed status 2 why the Off indicator is always flashing. Thank you very much for your help.As soon as understanding how the whole system works, it is a 10 minutes job to reconfigure the system from scratch. Bosch Solution Alarm Keypad Keeps Beeping If you encounter nuisance beeping coming from the keypad this means you will have a fault condition. The beeps will be heard at oneminute intervals, and either a FAULT light or an exclamation mark trouble indicator icon will flash on the keypad. To remove the fault altogether, you will need to diagnose and correct the issue causing it. Fault Analysis Solution Series alarm systems have a comprehensive index of possible faults to indicate just about any abnormal or undesirable condition. Take note of the numbers that display, indicating the general faults. If multiple numbers show at Step 2, you will need to run Fault Analysis multiple times to look into each one as per Step 3. For a more accurate list of faults and their descriptions, please refer to the specific manual for your system, as Fault Analysis Mode will vary slightly, depending on the model of your alarm panel.Help us improve this article with your feedback. You may have to register before you can post click the register link above to proceed. To start viewing messages, select the forum that you want to visit from the selection below. Bosch Security Camera system kits and equipment Bosch Solution 6000 Alarm PanelPower Sydney, NSW Australia Australian Made Multiple awards winning Ness Security Guard III with onboard PIR 15 meters coverage, 24 Zones to add NESS Wireless Sydney, NSW Australia Hills Reliance 16 Zone Alarm Panel. Includes control panel. LED code pad. S4312 7AMP battery. S4402 plug pack with S3807 piezoOur fixed price alarms servicing applies to Sydney suburbs. The Sydney, NSW Australia Agility 3 Panel with IP Network module All Sydney, NSW Australia 06112015 0134PM All Sydney, NSW Australia 06112015 1235PM Agility 3 Panel with IP Network moduleOur fixed price alarms servicing applies to Sydney suburbs. The Sydney, NSW Australia 23052015 0315PM Bosch Solution 3000 Alarm Panel. RF3212E Wireless Receiver two Radion key fobsHaving this functionally at your fingertips drastically improves the security of your property given that most thieves would check All you need to do is fit a standard mobile sim card to the unit, program it for SMS messaging, key in your mobile number and it will send text messages of alarms to your phone for This setup allowed for a timestamped record of office security system This means that the system can have eight wired

and 8 wireless alarm devices connected to it. Examples of alarm devices are movement detectors, reed switches, and smoke detectors. The solution 880 is Bosch's cost effective panel that will allow wireless devices to be connected to it. The Solution 880 has a home area and can be programmed for home protection. This means it has a home area with devices reed switches etc that will go into alarm if opened while you are at home. If you install a wireless remote kit to it, the 3 and 4th key fob buttons can be setup to control your home's garage doors this function can be helpful as you will only need one remote for alarm and garage operation. This wired kit is suited to single story home installation, see cabling installation issues.

The kit comes with three Bosch blue line quad detectors. These detectors have two passive Infrared sensors in them. They provide better protection against false alarms due to both sensors having to see the same movement for the detector to send an alarm to the panel. The Bosch 880 panel has a PSTN dialer and can be configured for back to base contact id monitoring or domestic dialing selfmonitoring, see monitoring options. This price is only applicable if the extra detectors are installed at the same time as we install the main kit. Wired Reed Switch Installed The reed switch in the picture is one of many different designs of reed switches for varied installation situations. Reed switches designed for aluminum doors are different to reed switches designed for timber doors. All reed switches cost around the same money, which is not expensive. Quite often the reed switch locations involve tricky cabling installation and drilling aluminum doors etc where there is no second chance you need to get it right the first time see cabling installation issues. Prices quoted include cable installation. GST is included in the price. Smoke Detector Installed We can install smoke detectors and connect them to the alarm system. The smoke detectors we use have a backup battery power supply and work in conjunction with the alarm system and on their own. They are BCA compliant and certified to Australian standard AS3786. This glass break detector is designed to sense sound waves produced by a window breaking. It should be noted that installation instructions limit one glass break detector per window. If you wanted to protect a whole house you need to purchase one for each window. Bosch Key Pads Available for the Solution 880 Extra 8 zone Icon Keypad Model number ICPCP508LW Extra 8 zone keypad supplied and Installed. This keypad allows the Solution 880 full complement of zones to be viewed.
