Its sturdy nature is disguised by a lightweight magnesium housing thats easy to hold and capable of surviving some serious abuse on the job site. This hardy model even has aggressive wear guards that help protect it from damage when you use it on abrasive surfaces. The N89C1 has a patented pushbutton adjustable depth guide to set nails at precisely the desired depths, quickly and conveniently, with minimal downtime between jobs. It also features an adjustable exhaust to direct castoff air away from your face and your workpiece, for a clearer view of your project. The N89C1 has a magazine that holds up to 300 nails. Cherie Priest Applications Use the N89C1 for almost any fastening application on the job site or home improvement project. Its perfect for framing, sheathing, siding, fencing, trusses, decks, bridging, pallets and crating, wood, or masonry. Whats in the box Stanley Bostitch pneumatic coil framing nailer. Choosing a Pneumatic Nailer For small household jobs, an oldfashioned hammer is the perfect standby. But if youve got a bigger project on your todo list, then a pneumatic power nailer could be your new best friend. Pneumatic nailers are a great alternative to traditionally powered nailers, because theyre capable of providing more power and they operate with fewer moving parts, so a pneumatic nailer can take more abuse than its corded or batteryrun cousins. A Word on Air Compressors All pneumatic tools require a steady supply of controlled, compressed air in order to work properly, and nailers are no exception. Bigger compressors with hardy motors and large tanks generate higher PSI levels and maintain them

longer, so you'll probably want a piston-type, two-stage compressor to power your nailer. Smaller or single-stage models are fine for little projects, but if you need a pneumatic nailer, the odds are good that you're looking for some intense PSI and CFM ratings. <http://gencatakan.com/upload/coolpix-7600-manual.xml>

Sometimes, a pneumatic nailer will come with its own compressor or it can be purchased as part of an air tool set. How Pneumatic Nailers Work Pneumatic nailers use compressed air power to cock and release the hammer. In order to fire a fastener, a valve opens to let air fill a cylinder which has a piston that's driven down hard and fast. This forces the nail out of the gun and into your workpiece. Then the piston recoils, and another nail is loaded. Important Points to Consider Check manufacturers' guidelines to find out what pressure PSI and volume CFM of air will give your pneumatic nailer the best results. Also, keep in mind that any restrictions on the air hose will diminish the tool's performance. Hoses that are very long, contain too much moisture, or are incorrectly sized will reduce air flow. This can prematurely wear out your tool and cause it to perform poorly. General Features Most models will feature a rubber nosepiece to prevent scuffing and marring of your workpieces, plus an exhaust system rear or adjustable to keep sawdust and debris out of your face and away from your project. With a powerful enough compressor behind them, they can shoot thousands of nails a day. Amazon calculates a product's star ratings based on a machine learned model instead of a raw data average. The model takes into account factors including the age of a rating, whether the ratings are from verified purchasers, and factors that establish reviewer trustworthiness. Please try again later. Empress 3.0 out of 5 stars Reason for the 3 stars has nothing to do with performance, usually leave reviews between several months and a year after purchasing. So will write another performance review along with any other criteria months or a year down the road.

At fourteen and a half inches would have to angle this instrument at best to fit into or between studs 16 on center, which in a perfect world might just fit, but in a less perfect world would not since not all carpentry carries that perfection. On a side note from a loved one with lots of muscle and a larger grip, says this is not a nail gun but instead a nail cannon and best be left for the Terminator, Lol! This price beat my nail distributor by 100 dollars. Heavy but built well. I like the coil nailers better than the stick nailers because they are much easier to work with in tight areas. Not to mention the N89C1 is capable of driving 16d nails which was the advantage of the stick nailers before. Amazon's great price and fast shipping just makes everything that much better. Some people like to change out the triggers because of the possibility of a double fire if the gun hits the surface twice. If you can control the gun and not let it bounce back after the recoil you shouldn't have any problems with double firing. Too bulky for a framing gun. Don't even think about this gun unless you're not going to use it in tight spaces or at odd angles. Basically, this Bostitch is a GREAT, tough, powerful gun. It will run EASILY on 90 PSI, and I'm sure it will run on even less. It came quickly, and in perfect condition. Beware, there's no air connection with it. You'll have to buy one to hook it up to your hose. It has female threads. Pros 1 There's an adjustable rafter hook. 2 Powerful! 3 Tough! 4 7 Year Warranty 5 Quick Nail Depth Adjuster Cons 1 The nailing tip is massive very wide and thick, which puts the muzzle far away from the wood when toenailing. That causes the toenails to not set all the way at steep angles. This gun has more than enough power to set them, but at an angle, just can't get that close. 2 There are two flanges that stick out the sides which you can't see in the pics. They prevent you from nailing at steep angles.

<https://skazkina.com/ru/3m-mp8745-projector-manual>

Also, the body of the gun is huge, also preventing many angles. 3 The bulk of the gun prevents you from nailing close to other objects. 4 Coil nails are easily damaged during shipping and handling!!!! I wanted the safer trigger configuration no bump firing so I had to replace the trigger with the gray one that was included. Weirdly, the instructions said that the gray one came from the

factory and that you need to replace the trigger to get the highvolume configuration. The replacement was easy though.It is only for working down on the floor. So i did not like it. I send it back. I get 10 dollar back in refund. This nail cost 264 dollar. I have not used it. Now i understand why the boss of amazon is richest man in the world. Sorry but i will delete my profile and i will never buy nothing in amazon or anything in us never again. The support here is terrible too. Egil Moen NorwayGood value for this day and age.It's much heavier than I expected and it has been misfiring a lot. I'll oil it again and see what happens.I contacted Bostitch support and they connected me to a local service centre. The wear guards were shipped out right away and have since been installed. Allinall, I was satisfied with the overall experience and time to resolution. Regarding the nailer, it is a bit heavy, but powerful. Im using it for decking and framing and it definitely cuts down on fatigue from hammering nails all day. I switched to the selective trigger kit included with the nailer and it was an easy process. As others have mentioned, its not ideal for toenailing as the tip is quite large and the body is bulky. For my purpose, I use a palm nailer for any toenailing. Overall, very happy with this purchase.Sorry, we failed to record your vote. Please try again Its not high quality but for quick house reno its exactly what I needed without breaking the bank. Just make sure you buy the recommended hose adapter and thread tape as this gun does not come with them.

When fully loaded, this nailer certainly isnt the lightest tool you could choose, but when you can drive 300 nails without having to reload, you quickly appreciate the timesaving capacity. With its aluminum housing and composite canister, this gun is a tough piece of equipment, designed to hold up to bumps and fallsthe inevitable beating nailers take on a job site. The nailers aggressive teeth easily grip lumber for toenailing. An adjustable deflector conveniently directs exhaust away from the user, and a quickrelease canister makes loading new coils a snap. We were impressed with how solid the whole unit feelsit has the burliness of an industrialstrength machine. Note this model does not have adjustable drive depth. Jonathon Tudor Amazon calculates a product's star ratings based on a machine learned model instead of a raw data average. The model takes into account factors including the age of a rating, whether the ratings are from verified purchasers, and factors that establish reviewer trustworthiness. Please try again later. Tim 1.0 out of 5 stars Foul weather, being

dropped, nothing ever phased them.. This one was much heavier than the older versions so I expected it to perform just as well.. Despite that when it fell off my trailer and dropped approximately 2 feet the tip broke and sent pieces everywhere. Apparently they don't make them like they used to. Used this with ring shank nails. Worked great. Good instruction on changing the trigger. Very happy with its durability. Hung 380 pickets. Start the new day, but in the drop of oil and go. Im a Bostitch pneumatic owner x6. Not planned to buy only Bostitch but that what has happened do to their price mark and continuing not to disappoint. Overall I like it. It's a tad bit bulky. I wish it came with a holder for your belt. Shot several rolls of nails and not a single jam or misfire. Not happy at all planned on using this tomorrow but looks like I will be hammering the nails in!

After using the clipped head for so long then using this one it seems like youll never run out of nails. Theres so many nails per coil, its great. Uses the Hitachi nails just fine. Not much else to the nailer to speak of. no extra frills or anything, it just works. Id recommend to anyone in the market for a new framing nailer. The nailer worked flawlessly and was a pleasure to use. I did buy Bostitch brand nails after reading the negative reviews about the Chinese imports. This gun is much shorter than the kind that uses the sticks of nails so it is better balanced. The huge supply of nails is also a great benefit. Magazine cover is cheap thin plastic, tooth on cleat is sharp so if you want to work on materials and not mark your work get yourself a siding nailer instead. It works fine and does what it says, but it will kill your arm if you expect to put up a fence with this. Sorry, we failed to record your vote. Please try again Sorry, we failed to record your vote.
