Most of the Sportview line of scopes are equipped with a tripod that helps steady the scope during use. Bushnell includes a hard carrying case for transporting the scope to your viewing areas. Turn the scope over to expose the mounting screwholes for the tripod. Insert the tripod setscrew into the mounting hole and turn the tripod clockwise to secure it against the scope. Pull the legs of the tripod down and set the leg locks a clasp that clicks, indicating it is locked into position. Set the tripod onto the ground so the scope is supported. Look through the eye piece and find a subject to view. Keep your subject, at first, within 100 yards. Turn the main focus dial the larger of the two until the subject appears closer than before, yet still seems fuzzy around the edges. Turn the second focus dial to clear the fuzzy edges and make the image sharp and crisp. Store the scope and tripod in the carrying case when you're done. Remove the tripod for transport. References Bushnell Sportview Scopes Techtalk Bushnell Sportview Scopes About the Author A former Alaskan of 20 years, Eric Cedric now resides in California. He worked in Russia, Iceland, Greece, Turkey and Belize. Cedric attended Syracuse University and is a private pilot. Lastmanuals provides you a fast and easy access to the user manual BUSHNELL SPORTVIEW. We hope that this BUSHNELL SPORTVIEW user guide will be useful to you. This booklet will help you achieve optimum performance by explaining how to use its various features and how to care for it. The following photographs are guides to the nomenclature and location of the riflescope parts mentioned throughout this text. Power Change Ring Fast Focus Elevation Adjustment Objective Lens Shoulder This setting provides you with the ideal adjustment range from the center position. Do this by placing the scope in a solid Vblock cardboard box with two slots. While looking through the scope in a normal viewing position, carefully rotate the scope. <http://globalewastemanagement.com/gemsuserfiles/dell-inspiron-desktop-service-manual.xml>

If target still rotates, use adjustments to correct. When still hunting or stalking game, a variable scope should be set to the lowest power. You then have the widest field of view for quick shots at close range. To change range focus, turn the Objective Adjustment Ring and align the number with the distance index dot. An alternative method is to look through the scope and turn the Objective Adjustment Ring until the target, at whatever range, is sharply focused. Use a high quality mount with bases designed to fit your particular rifle. The scope should be mounted as low as possible without touching either the barrel or the receiver. Carefully follow the instructions packed with the scope mounts you have selected. Before tightening the mount rings, look through the scope in your normal shooting position. Adjust the scope either forward or backward until you find the furthest point forward to ensure maximum eye relief that allows you to see a full field of view. This warranty does not cover damages caused by misuse or improper handling, installation or maintenance of the product. In any way cannot Last manuals be held responsible if the document you are looking for is not available, incomplete, in a different language than yours, or if the model or language do not match the description. 12-36 x 50mm Vari-Power Spotting Scope

1. MOUNTING

Remove the spotting scope and tripod from the box. Screw the tripod attachment screw into the tripod boss on the spotting scope. Spread the tripod legs and set on a solid surface.

2. CONTROLS

The spotting scope is focused with the focus ring. The tube with the vari-power ring and the eyepiece will move "in" and "out" depending on the direction the ring is turned. When the tube is all the way "out," the spotting scope is at its closest focus position.

The magnification is changed by rotating the vari-power ring. It will be necessary to re-focus when the magnification is changed.

The spotting scope is positioned on the tripod with the elevation and horizontal control. To adjust where the scope is pointing, rotate the handle counter clockwise. To lock, rotate the handle clockwise.

3. USE

Remove the dust caps. Point the spotting scope as desired - as described in section 2.

CAUTION: DO NOT LOOK AT THE SUN THROUGH THIS SPOTTING SCOPE AS SEVERE EYE DAMAGE MAY RESULT.

Set the vari-power ring at the lowest power (20x). Focus the spotting scope as described in section 2. Increase the power, and re-focus. Please note, however, that at the highest power the image may not appear sharp, because of several causes. First, the image will become less bright, second, all disturbances and contaminations in the air will be emphasized, and last, all motion and vibration of the spotting scope and support will also be magnified.

4. CARE

The lenses of your spotting scope are 100% hard magnesium fluoride coated for highest light transmission. As with any optical coating, special care must be taken in cleaning the lenses. A Lens Cleaning Kit is recommended. Moisten surface of lens slightly and wipe dry using a circular motion starting at center of lens. Wipe or brush off any dirt or dust on the outside of spotting scope and tripod.

Lit. #: 91-0222/03-01

Model # 78-1236

5. CAUTION

Never disassemble your spotting scope or tripod. Special tools and equipment are required for service and irreparable damage can result from untrained attempted service. Unauthorized service may also void the Warranty.

WARRANTY/REPAIR

SPOTTING SCOPE LIFETIME LIMITED WARRANTY

Your spotting scope is warranted to be free of defects in materials and workmanship for the lifetime of the original owner. The Lifetime Limited Warranty is an expression of our confidence in the materials and mechanical workmanship of our products and is your assurance of a lifetime of dependable service. In the event of a defect under this warranty, we will, at our option, repair or replace the product, provided that you return the product postage prepaid. This warranty does not cover damages caused by abuse or improper handling, modification or maintenance of the product.

Any return made under this warranty must be accompanied by the items listed below:

- 1)A check in the amount of \$19.99 to cover the cost of handling (Name and address for product return)
- 2)An explanation of the defect
- 3)Proof should be well packed in a sturdy outside shipping carton to prevent damage in transit and return postage prepaid to the address listed below.

To calculate the overall star rating and percentage breakdown by star, we don't use a simple average. Instead, our system considers things like how recent a review is and if the reviewer bought the item on Amazon. It also analyzes reviews to verify trustworthiness. Please try again later.

Chris 5.0 out of 5 stars They always seemed to catch light better than anything I have ever owned or used. I have never had a single complaint nor have they ever required more than a cleaning. Each of my hunting buddies swear by one brand or another. Most prefer Leupold and Nikon for more specific reasons and after spending several thousand dollars on trail cameras and having most of them fail in only a few weeks, my hunting group was extremely upset because that was the worst season we ever had. I told myself it must have just been a bad batch 9 of 14 failed but that's electronics. So I bought these for my son to use when we went hiking and he kept complaining how he couldn't see well out of them and they gave him a headache. After a mile or so I decided to give them out a try and sure enough, it wasn't inexperience. The field of vision is POOR and that's being kind and whatever coating being used on the lenses was upsetting.

I went to the store and looked at two different pairs of trophy Binoculars that were on the expensive side and I noticed how poor the optics have become. However they are coating the lenses these days has killed my loyalty to the brand. The quality just isn't there anymore. It made me feel like a company that took pride in producing the best quality product they could, to a company run by bean counters and penny pinchers for profits sake. I'm actually hurt. For years I used to argue with my friends about what greatness was to being almost embarrassed to having the name on any of my hunting gear. I could make out a car's license plate number from over 100 yards away. These are great for the size and great for letting little kids borrow keep it no problem. Drop it, not a care in the world. Get it stick. Well a where do little kids always find stuff to get their hands sticky when you thought you knew for a fact there was nothing to aid them and their little stickier fingers. The first number is magnification so it is 8x. The second number is the lens size so don't expect great low light performance or an especially wide field of view. First one had a crack in a lens. Second one had a loose and inop focus wheel. Third one would not focus both eyes. Fourth pair had so much water spots and debris inside them that the image looked like it was dusk or dawn when it was noon and bright and sunny outside. Just what I wanted. Solid construction. Tight and smooth hinges and focus roller. Rubbery grip. Look cool too. First, as might be expected of something at this price point, QC and build construction seems to not be the best. There was an internal crack or possibly some foreign object inside of it. The focus knob has kind of a vague inconsistent movement. The included pouch, though it might break in, isn't very convenient to get them in and out. Visual quality was fine otherwise, and I was actually surprised at how much 8x magnification actually is.

<http://www.caribbeandentist.com/wp-content/plugins/formcraft/file-upload/server/content/files/1626e5b208ca19---43-vortec-service-manual.pdf>

I ordered a slightly higher magnification and larger objective lens version for my wife's bird spotting purposes. I am awaiting a replacement, and will nudge up the rating assuming the replacement is no better. I originally bought this 12x for the opera and I also got the 8x for my wife. 12x is just too much for the opera, and 8x was great. At 12x it was hard to focus and this did not pull enough light so everything was dark. During the day it works great but then you still have shaking issues. I think at 12x you really need to start looking at binoculars with image stabilizers. All in all this product is

solid, can take drops, and does its purpose. My only issue is that it is very hard to focus. I took a punt and can honestly say that these bins are excellent the field of view is good the magnification good and the build quality excellent. Now they aren't going to see the craters on the moon but for a pocket pair of bins you can't go far wrong. Sorry, we failed to record your vote. Please try again They are absolutely great for the price. We are both keen birders, but can't spend a fortune on expensive equipment. I have a pair of Nikon binoculars, and these are just as good, in terms of clarity, focus, and also being lightweight. Our only small criticism is the neck cord which isn't as comfortable to wear as a flat strap. Sorry, we failed to record your vote. Please try again I wanted these for an upcoming trip to London where we were going on the London eye. They worked a treat and the kids enjoyed using them. They have been a god send on future trips as my littlest loves to use the coin operated binoculars so these have been perfect. Too views can be had and they were brilliant atop the Eiffel Tower. Also great for bird watching. The binoculars are well made, sturdy and have a good little carry bag. Nice and small to fit in a rucksack for days out. Sorry, we failed to record your vote. Please try again Not great binoculars but then not much money.

Amazon customer service were great in refunding the purchase, but if I were you I'd avoid these. Sorry, we failed to record your vote. Please try again I was pleasantly surprised with build quality and the high quality of the lenses. Excellent, general use binoculars. UPDATE. After using the binoculars several times. The right optic detached from the main body. It appears to have just been glued there instead of screwed. It's not possible to realign the optics, so the binoculars are no longer useable. On close inspection, the binoculars aren't as well made as they at first appeared. Now scrapped. Sorry, we failed to record your vote. Please try again Really big bins with powerful magnification need a tripod or to be held very steadily. I use them for boating well, not quite boating as such but looking for buoys and markers! and they do an excellent job. I also use them for a little amateur bird watching. Easy to carry and deploy. Highly recommended, especially at this price. Sorry, we failed to record your vote. Please try again Sorry, we failed to record your vote. Please try again As for the binoculars themselves, very pleased, clear image, good magnification, reasonable price When buying them, I did suspect I would be sent the other version of this model, so not overly disappointed. Sorry, we failed to record your vote. Please try again Her father, who is familiar with binoculars, said they were very good, easy to focus and well constructed. Sorry, we failed to record your vote. Please try again The image is clearer and sharper with no distortion. They are also much better built. Recommended. Sorry, we failed to record your vote. Please try again They're compact, lightweight and easy to pack in my bag, but my only regret is the cord whereas I would have preferred a proper strap to put round my neck. Sorry, we failed to record your vote. Please try again The main use was for whale watching. For this these were perfect. They're lightweight and compact.

The 10X magnification was perfect. Sorry, we failed to record your vote. Please try again However they're not very bright, the focus mechanism is not accurate and the dioptre adjustment has to be adjusted depending on your focus range, so you're fiddling with it constantly. If you don't need good bins, this cheap and cheerful pair will suffice for simple spotting. Sorry, we failed to record your vote. Please try again In order to navigate out of this carousel please use your heading shortcut key to navigate to the next or previous heading. For your consideration is a nice pair of older binoculars Details. God Bless you and have a beautiful day.
